

Data Flow Diagram

Date	29 September 2026
Team ID	SWTID-2026-9879
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	4 Marks

Data Flow Diagram

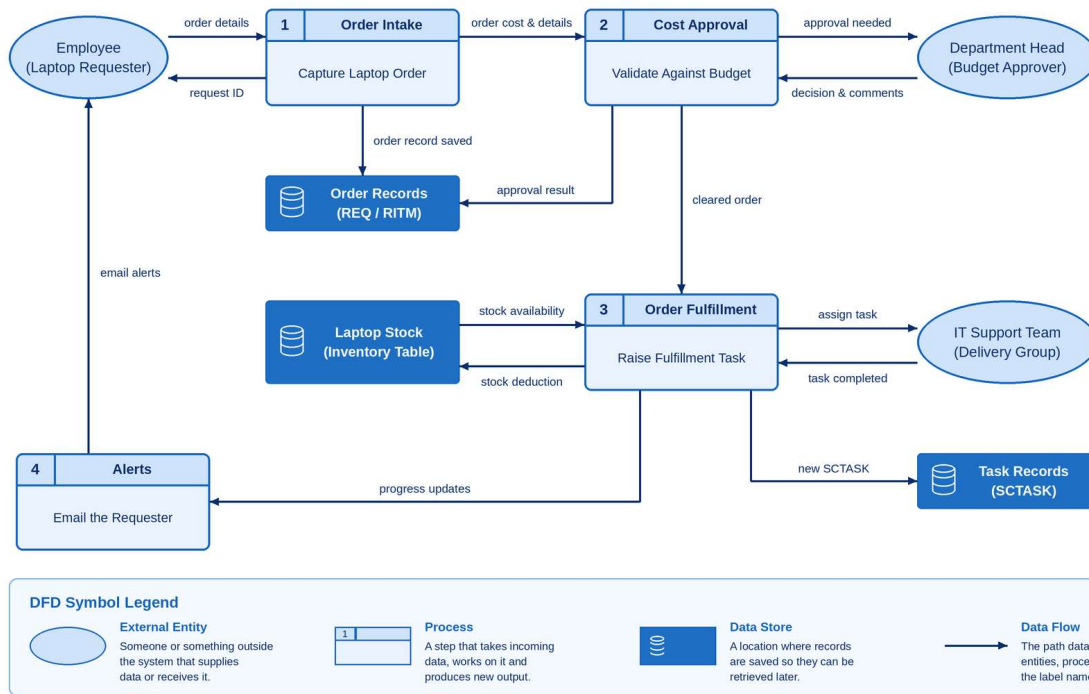

This diagram traces the movement of data in the laptop ordering system. An employee places a laptop order through the catalog, the Flow Designer approval logic evaluates the cost, and the IT Support Team delivers the laptop once stock is confirmed. Each symbol used in the diagram is explained in the legend below.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	A person, group or outside system that interacts with the project by supplying data to it or receiving data from it (e.g., Employee, Department Head).
Rectangle with numbered header	Process	A step that takes the incoming data, works on it and produces new output data (e.g., Validate Against Budget, Raise Fulfillment Task).
Rectangle (solid fill, no number)	Data Store	A location where information is saved so it can be retrieved later (e.g., Order Records, Laptop Stock).
Labeled arrow	Data Flow	The path along which data travels between entities, processes and data stores; the label on the arrow names the data being carried.

Data Flow Diagram: Laptop Order Approval and Fulfillment

The diagram below maps how information travels among the employee, the Department Head, the IT Support Team, the four processes and the three data stores.

Process Description

No.	Process	Description
1	Order Intake	The employee signs in to the Service Catalog, opens Laptop Order, picks the laptop type, brand and screen size, and submits the form. The system generates a request (REQ) and a requested item (RITM) and returns the request number.
2	Cost Approval	A Flow Designer flow compares the order cost with the approved budget. Within the limit, the order is cleared automatically. Above the limit, it goes to the Department Head, who approves or rejects it with comments.
3	Order Fulfillment	Once cleared, the flow looks up the Laptop Stock table for availability and raises a catalog task (SCTASK) for the IT Support Team. On delivery, the task is closed, the stock count is reduced and the request is marked complete.
4	Alerts	Whenever the order is placed, approved or rejected, and delivered, the requester is sent an email, so there is no need to chase for updates.
