

Project Design Phase
Proposed Solution Template

Date	29 September 2026
Team ID	SWTID-2026-9879
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Employees who need a laptop raise a request that is approved and processed manually. Approvers are interrupted even for routine, in-budget orders, IT staff spend time creating tasks and checking stock by hand, and requesters get no clear status updates. This causes slow delivery, missed or inconsistent requests and repeated follow-up queries.
2.	Idea / Solution description	Build a Laptop Order catalog item in the ServiceNow Service Catalog with variables for laptop type, brand, screen size and accessories. A Catalog UI Policy shows only the RAM and storage options that match the selected type. A Flow Designer flow compares the order cost with the approved budget: in-budget orders are auto-approved, while higher-cost orders go to the Department Head. After approval, the flow checks stock in the Inventory table, creates a catalog task for the IT Support group and sends email notifications at each stage. A dashboard shows pending orders, approval rate and average delivery time.
3.	Novelty / Uniqueness	Combines cost-based auto-approval, stock-aware task creation and stage-wise notifications in one low-code flow, so a standard order needs no manual step from approvers or IT staff. The whole solution is configured with native ServiceNow features (no custom code or external tools), which makes it easy to adjust the budget limit, approvers or laptop options later.
4.	Social Impact / Customer Satisfaction	Employees get their laptops faster and can see the status of their order, which reduces waiting and anxiety, especially for new joiners. Managers are no longer interrupted by routine approvals, and IT staff can spend their time on complex support issues instead of repetitive tasks.
5.	Business Model (Revenue Model)	This is an internal IT service improvement, so it does not earn direct revenue. The value comes from savings in IT and approver time, fewer delays in onboarding and better control of laptop spending and stock.

		The same catalog item and flow can be packaged as a reusable ServiceNow update set and offered to other departments or client organizations as a paid implementation or managed service.
6.	Scalability of the Solution	Every order runs in its own flow execution, so many requests are handled in parallel. The budget limit, laptop types and approvers can be changed without rebuilding the flow, and the same pattern can be extended to other standard requests such as monitors, mobiles or software licenses, and to more departments or locations on the ServiceNow platform.
