

Project Development Phase Performance Test

Date	29 September 2026
Team ID	SWTID-2026-9879
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	

Model Performance Testing:

S.No.	Parameter	Screenshot / Values
1.	Data Rendered	Data comes from ServiceNow tables: Request (sc_request), Requested Item (sc_req_item) and Catalog Task (sc_task).  <i>Order placed: Request Number REQ0010001 (sc_request)</i>  <i>Request record REQ0010001 with approver and request state</i>  <i>Catalog Task SCTASK0010001 (sc_task) for RITM0010001</i>
2.	Data Preprocessing	No separate preprocessing is needed because ServiceNow reports and dashboards read the live platform tables. No data cleaning or import was required; orders are created directly through the Service Catalog.

3.	Utilization of Filters	Filters: request state (pending / approved / rejected / closed), laptop type and opened date range.  The screenshot shows the ServiceNow Request Management interface. At the top, there are tabs for 'Requests', 'Requests by State', 'Requests by Type', and 'Requests by Date'. Below these, there are several filter sections: 'Request State' with a dropdown menu showing 'Pending', 'Approved', 'Rejected', and 'Closed'; 'Requested Date' with a date range selector; and 'Requested By' with a user selection dropdown. The main area displays a list of requests with columns for 'Request ID', 'Requester', 'Request Type', 'Request State', and 'Created'. The bottom of the screenshot shows a table with columns for 'Request ID', 'Requester', 'Request Type', 'Request State', and 'Created'.
4.	Calculation fields Used	Count of pending orders, approval rate (approved / total) and average delivery time (closed date - opened date), calculated with ServiceNow report aggregations (Count, Average) instead of Tableau calculated fields.
5.	Dashboard design	No of Visualizations / Graphs - 3 (Pending orders, Approval rate, Average delivery time)
6	Story Design	No of Visualizations / Graphs - 1 (Average delivery time report). A Tableau story is not used; ServiceNow dashboard and report present the results.
